

STAGE 1 BOARD COMBO

The Stage 1 Board from IsoAcoustics portable isolation platform that decouples guitar/bass amps, stage monitors and sub-woofers from the stage while improving sound clarity and bass punch in a performance. This portable solution will provide consistency in studio, at home and from one stage to the next.

The integrated isolators on the New Stage 1 Board are directional. The isolators prevent off axis movements and keep the energy aligned with the energy generated from the speaker or amplifier drivers. The results are greater focus and clarity.

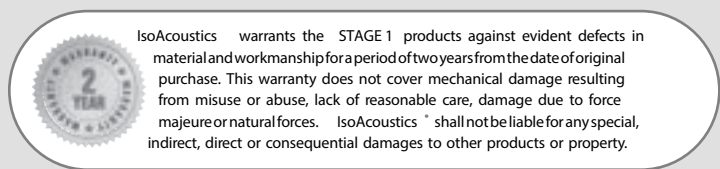

Use the Grip-Tape to provide a stronger connection. Position the Grip-Tape on the Stage 1 Board so that it lines up with the existing feet that are underneath the cabinet. Clean the surface of the board, then remove the release paper and carefully apply the Grip-Tape to the Stage 1 board.

Weight Capacity: 100 lbs (45kg)
